PROFESSIONAL SUMMARY

Software Engineer with more than two and a half years of professional experience building and maintaining production web applications. Worked on backend systems, APIs, and database-driven solutions. Skilled in JavaScript, React, PHP, Python, SQL, REST APIs, automated testing, and deployment processes. Worked directly with clients to gather requirements, develop features, debug issues, test applications, deploy changes, and support them in production. Also experienced in developing AI-enabled applications using RAG and multi-LLM integrations.

TECHNICAL SKILLS

- Languages:** JavaScript, Python, SQL, Java
- Frontend:** React, HTML5, CSS3, Bootstrap
- Backend & APIs:** PHP, Node.js, REST APIs, API Integration
- Databases:** MySQL, PostgreSQL, MongoDB, SQLite
- AI & Data:** RAG, LLM APIs, Embeddings, Vector Search, TensorFlow, NumPy, Pandas
- Testing & Tools:** Playwright, Postman, Git, GitHub, VS Code
- Cloud & Deployment:** Cloudways, Cloudflare, cPanel, Linux/CLI, FTP/SFTP
- Platforms:** WordPress, WooCommerce, LearnDash

PROFESSIONAL EXPERIENCE

WisdmLabs, India

Software Engineer | Jan 2024 - Aug 2026

Key Contributions:

- Worked closely with clients to understand their needs, fix production problems, and deliver features and improvements across various web applications.
- Maintained live websites by adding custom features, integrating systems, improving backend functionality, and enhancing user interfaces. Involved in security, performance, deployment, maintenance, and ongoing support.
- Created **Python and shell scripts** for data migration, data transformation, and processing large structured datasets, especially CSV-based workflows.
- Built custom **React-based Gutenberg components** and used JavaScript libraries such as Chart.js, DataTables, Select2, Bootstrap, and Font Awesome for client-facing functionality and UI workflows.
- Improved **MySQL and PostgreSQL queries** for complex production workflows, including work with legacy and updated LearnDash database structures and reconstruction of learning and quiz-result data.
- Developed and maintained **WooCommerce and LearnDash functionality**, including subscription models, membership rules, course access, certificate generation, and data migration.
- Handled production maintenance using tools such as **Cloudways, Cloudflare, cPanel, Linux/CLI, and FTP/SFTP**. This included scheduled updates, backups, testing, troubleshooting, and rollback procedures when needed.
- Developed **end-to-end tests using Playwright** to check critical UI flows. Used Git for development, including branch management, resolving merge conflicts, fixing issues, and recovering from problematic commits.

- Executed a production migration of **more than 16,000 donation orders and recurring subscriptions** from GiveWP to WooCommerce Subscriptions. Used custom queries and data matching to correctly link users, payment tokens, subscriptions, and order histories. Validated the migration in staging before production.

SELECTED PROJECTS & APPLICATIONS

AI Chatbot System | RAG & Multi-LLM Application:

- Built an AI chatbot based on **Retrieval-Augmented Generation (RAG)**. The system processes documents, splits them into chunks, creates embeddings, retrieves relevant content, and re-ranks results to provide responses grounded in the available knowledge base.
- Integrated multiple large language model providers, including OpenAI, Anthropic Claude, Google Gemini, and Together AI through a unified backend.
- Designed configurable chatbot instances for different knowledge bases and use cases, with individual bots deployed across multiple pages.
- Developed a LearnDash-aware extension that scopes chatbot responses based on a user's actual course access and supports course and product recommendations.
- Deployed the chatbot on YSI-INET and load-tested the system with **500 users**, achieving approximately **5–12 second response times under that test load**.
- Deployed the chatbot on YSI-INET and ran load tests with up to **500 users**. Achieved average **response times between 5 and 12 seconds** under test conditions.

Expense Management System | MERN Stack:

- Built a full-stack expense management application as part of a team project using **React, Node.js, Express, MongoDB, and Chart.js**.
- Implemented authentication, income and expense tracking, categorization, database operations, and interactive reporting.

SnapEdit | Python Image Processing:

- Developed a desktop image editor in Python with a Photoshop-inspired interface, supporting cropping, resizing, filters, and other basic editing functions.
- Used TensorFlow for experimental image upscaling. Combined PIL/Pillow, OpenCV, NumPy and other image processing tools for manipulation.

SELECTED CLIENT WORK

YSI-INET (Enterprise Web Platform):

- Worked on this platform for **more than two years**, delivering custom functionality, backend integrations, database workflows, performance improvements, and ongoing production support.
- Built a **PayPal payout workflow** that allows administrators to trigger payments for approved events. It supports USD, EUR, and GBP, with payout status retrieved through API calls.
- Created an **AI-assisted attendee qualification workflow** using the existing chatbot API and client-defined criteria. It helps administrators filter participants based on event details and available attendee information.
- Managed planned production maintenance with backups, updates, testing and troubleshooting. Used **Cloudways, Updraft, Cloudflare and related tools** for operations.
- Launched the RAG-based AI chatbot as a public feature on the platform.

12MinPrep (EdTech Learning Platform):

- Worked on this platform for **over two years**, delivering backend functionality, integrations, database workflows, and ongoing client support.
- Built custom functionality using **WordPress, PHP, JavaScript, REST APIs, and LearnDash**.
- Worked extensively with LearnDash database structures and optimized query performance for learning, assessment and quiz result tracking.
- Managed production changes, including backups, updates, testing and debugging, always aiming to complete maintenance during scheduled windows.

EDUCATION

- **Master of Science (MSc) in Computer Science** | Fergusson College, Pune | Savitribai Phule Pune University | 2022 - 2024 | CGPA: 8.6
Relevant Coursework:
Data Structures & Algorithms, Database Systems, Software Engineering, Operating Systems, Computer Networks
- **Bachelor of Science (BSc) in Computer Science** | Fergusson College, Pune | Savitribai Phule Pune University | 2019 - 2022 | CGPA: 9.62

CERTIFICATIONS & ADDITIONAL TRAINING

- **Google Data Analytics Professional Certificate (Coursera):** Data analysis, visualization, and insights
- **R Programming Certification (Coursera):** Statistical computing, data manipulation, and analysis
- **UX Design Certification (Coursera):** User research, wireframing, and interface design principles
